EDUCATION

Indira Gandhi Delhi Technical University for Women	2021 – 2025
B.Tech - Electronics and Communication Engineering with Artificial Intelligence	GPA: 7.5/10
Dr. Virendra Swarup Education Centre	2018 – 2020
Senior Secondary (Class XII) 93% Secondary (Class X) 95.4%	

WORK EXPERIENCE

Associate Software Engineer, ServiceNow	Jul 2025 – Present
- Built a stateless Demand-to-PRD pipeline for the Build Agent that clarifies requirements, generates versioned PRDs and wireframes, and creates Epics and Stories after SHA-256 based stakeholder sign-off, invalidating stale approvals on edits. - Developed a six-persona review pipeline spanning development, QA, security, performance, risk, and technical review to validate stories before and after implementation and deploy Fluent SDK changes. - Improved SEO and server-side rendering across ServiceNow Store catalog pages, resolving critical purchase-page defects and adding Playwright end-to-end coverage to Jenkins nightly runs.	
Software Engineer Intern, Amazon	Jan 2025 – Jun 2025
- Built a Python LLM inference pipeline on Amazon SageMaker integrating Claude 3.5 via AWS Bedrock to extract floor numbers from noisy address inputs, achieving 87% prediction accuracy. - Designed CloudWatch dashboards and alarms using AWS CDK to monitor service health, latency, and error thresholds; built a reusable S3 retry utility with exponential backoff and offloaded oversized Step Function payloads to S3. - Built a real-time ingestion pipeline for the Address Resolution System, replacing bulk processing with streaming updates over AWS SQS, Lambda, and OpenSearch to enable incremental upserts. - Supported a JDK 8 to 17 migration across internal packages, resolving dependency conflicts and Policy Engine risks.	
Associate Software Engineer Intern, ServiceNow	Jun 2024 – Aug 2024
Built modals and screens for the ServiceNow Store frontend with the app-store team in the platform org, and supported the migration of the site from Angular.js to React.js.	

PROJECTS

Web Notes MCP | Go, Elasticsearch, Docker, Kibana | [GitHub](#)

- Authored and released a production-grade MCP server in Go implementing JSON-RPC 2.0 over stdio, exposing 6 tools to AI agents including web search, Elasticsearch-backed note storage, and automated Markdown report generation.
- Engineered a sandboxed code execution engine leveraging Linux containerization via Docker, spinning up ephemeral containers per request with memory/CPU limits, executing code in isolation, and auto-destroying after output is captured.
- Deployed a multi-container stack via Docker Compose with multi-stage builds, health checks, and service dependency ordering, applying Kubernetes-adjacent orchestration concepts to manage container lifecycle and service dependencies.

SKILLS

Languages: Java, Python, Go, TypeScript, JavaScript, SQL, Kotlin, C++

AI/ML: LLMs, Generative AI, Agentic Workflows, MCP, Prompt Engineering, RAG, Machine Learning, Deep Learning, Computer Vision, PyTorch, TensorFlow, OpenCV, Scikit-learn, NumPy, Pandas

Frameworks & Infrastructure: React.js, LitElement, Node.js, AWS, Docker, Kubernetes, Kafka, PostgreSQL, Elasticsearch

Tools: Git, GitHub, VS Code, IntelliJ IDEA, Kibana, Playwright, Jenkins, ServiceNow Platform

ACHIEVEMENTS

- Top 5 Finalist in the Women Who Code ServiceNow Hackathon across India, and selected as a Scholar for the Google Women Engineers Program, among the top 250 of 28,000+ applicants.
- Secured AIR 996 and college rank 4 in Coding Ninjas Codekaze.
